

- DL3021/DL3021A: single output, 150 V/40 A, total power up to 200 W
- DL3031/DL3031A: single output, 150 V/60 A, total power up to 350 W
- Dynamic mode: up to 30 kHz
- · Adjustable current rising speed: 0.001 A/µs to 5 A/µs
- Min. readback resolution: 0.1 mV, 0.1 mA
- 4.3-inch TFT LCD, capable of displaying multiple parameters and states simultaneously
- Overvoltage/overcurrent/overpower/overtemperature/reverse voltage protection
- · 4 static modes: CC, CV, CR, CP
- · 3 dynamic modes: continuous, pulsed, toggled
- · List function supports editing as many as 512 steps
- · Battery test function, OCP test, OPP test, factory test function, etc.
- · Short-circuit test function
- · Power-off memory function
- · Built-in RS232/USB/LAN communication interface
- · USB-GPIB module (optional)

DL3000 is a cost-effective programmable DC electronic load with high performance. With a user-friendly interface and superb performance specifications, DL3000 series provides various interfaces for remote communication to meet your diversified test requirements. It can be widely used in various industries, such as automotive electronics, aerospace, and fuel cells.

## Design Features

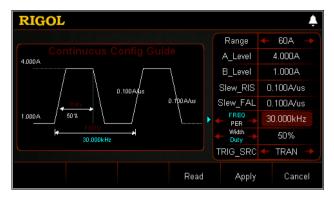

## Typical Applications

- · General-purpose testing in the R&D lab
- DC power supply industry, such as regulated power supply, constant current power supply, switching mode power supply (SMPS), module power supply, power adapter, etc.
- Battery industry, such as various batteries and cell batteries
- · Charger industry, such as battery charger and cell phone charger
- · Power electronic device industry, such as MOSFET, IGBT, capacitor, and ballast resistor
- · Teaching experiment

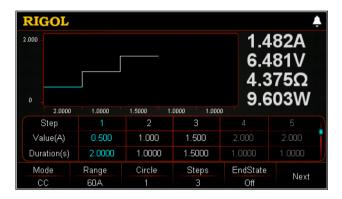

## Design Features

## 30 kHz dynamic mode

Transient test function enables the load to periodically switch between two set levels (Level A and Level B). It can be used to test the transient characteristics of the DUT. The highest frequency can be set to 30 kHz. Besides, in the guide interface, you can configure parameters in the parameter configuration list and view the configuration diagram at the left of the configuration list in the real-time manner.

### **Powerful list operation function**

You can generate complex sequences by editing the setting value for each step, the dwell time, and slew rate (the slew rate can only be edited in CC mode) to meet the complex test demands.

### Easy-to-use function of file storage and recalling

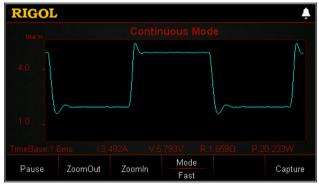

The load allows you to save different types of files to the internal and external memories. You can recall and read them when necessary.

## 5 A/µs current rising speed

Current rising speed is defined as the speed of transition from one setting to another. You can set the actual transition time from one setting to another by changing the current rising speed. Adjustable current rising speed: 0.001 A/µs to 5 A/µs.

## Powerful waveform display function

The electronic load provides the waveform display function and supports the following operations for the waveform, such as pausing the waveform, enlarging and narrowing the waveform, and capturing the waveform. Therefore, you can dynamically observe the trend of parameters changes.

## Sound OVP/OCP/OPP/OTP/Reverse Voltage **Protection**

When OVP/OCP/OPP/OTP/reverse voltage protection occurs, the load will immediately turn off the input automatically and stop sinking. Then, a prompt message is displayed.

## Specifications

All the technical specifications are guaranteed when the instrument has been working for more than 30 minutes under the specified operating temperature.
